This video presents the use of 3D Studio MAX by a graphic designer working in the jewelry industry. The pendant used in the design features a tree silhouette in a freehand drawing style. The point cloud was created in VisualCAM and imported into 3D Studio MAX. The designer starts by creating a new 3D Model in 3D Studio MAX from which he creates a wireframe. On top of the wireframe he applies one of six 3D surface finishes. Then he adds a profile drawing of the pendant and embeds the pendant in the model. In this example this is a fast and easy way to create a 3D model. If you are using an older version of VisualCAM, the following issue has been observed. A lot of the 'Change Custom Color's' is not working. If you have used the Photoshop add-on to change the custom color, you can still modify the colors of the imported models. This can only be done if you're on the current version of Photoshop which has a new version of the application. Check your version of Photoshop in the Add-ons list. If you are the current version, there are more menu options in the Customize section. You can either change the custom color manually, or use a new Adobe Photoshop Add-on. Check for Updates in Photoshop. Go to (Help > Check for Updates). Search Google for 'Photoshop Custom Color' and select 'Photoshop Custom Color' in the Adobe Search box. Installing a custom color in Photoshop is done using the main Photoshop application. If you do not see a menu in the Customization pane, go to File > Customize... and click the Customize button at the bottom of the screen. You will see the Photoshop Custom Color menu. Select the Custom Color you want to change and click Edit. Click the Change Custom Color radio
