**What's New in the?**

Light and Shadow Model is a small, Java based tool specially designed to display light that either passes through a mask with a hole in it, or it is blocked by an object, as it travels to a screen on the right. The user can turn on and off two light bulbs (red and blue) and drag the bulbs around the screen to change their positions. Investigate how the patterns of light and shadows change as you move the bulbs, the mask or object, and/or the screen, and as you change the size of the mask or object. The program is small, only 255Kb (JRE required), so you can try it right away. The program, as well as a Java platform version, is available at www.idlabs.com. Running the program You can run the program on any machine that supports the Java Platform. To run the program, launch the Java Runtime Environment. This will open the program's own startup window, where you will find the following options: * Choose the Java runtime version. * Choose a command line to open this application. * Choose the version of your Java Runtime Environment (JRE). Click OK to accept these options. * If you are already running a version of Java, click the option to open this application in a new window. Otherwise, click the "Browse" button, navigate to where you have installed the JRE, and select the JRE version you want to use. > **NOTE**: If you have multiple versions of the Java runtime on your machine, you can select the one that you want to use from the list that appears. * When you run the program, you will be asked which light bulbs to display. (For the complete list of light bulbs available, see the README file for this program). A simple program to display only one light bulb is included with the distribution. To run it, click the "Open" button. The light bulbs appear on the right side of the screen, like this: The color of the light bulbs represents the color of light that comes from the bulbs. The blue bulbs represent light that passes through the mask, and the red bulbs represent light that is blocked by the mask. The darkest areas on the right side of the screen are where the light bulbs are blocked. All of the colors, as well as the screen, can be dragged around the screen. The mask is a simple square with an opaque area in the middle. The following program will display the light bulbs and the mask, and allow the user to move them around the screen. The program contains a background color that can be changed. In this case, we used a brown color. All of the windows of the program appear on the left side of the screen. The

**System Requirements:**

Minimum: OS: Windows XP, Windows Vista, Windows 7, Windows 8, Windows 10 Windows XP, Windows Vista, Windows 7, Windows 8, Windows 10 Processor: 2 GHz Processor (Pentium or equivalent) 2 GHz Processor (Pentium or equivalent) RAM: 256 MB RAM (High Performance Graphics card may require more) 256 MB RAM (High Performance Graphics card may require more) Video Card: DirectX 9.0c compatible graphics card DirectX 9.0c compatible graphics card DirectX: Version 9.0c
