I'd been at work since the morning, so it was a nice day off. It was a Saturday and the doctor said I could go visit his dad, so I picked him up from the hospital. He'd been having pain in his hip for a while, so he saw an orthopedic surgeon a while ago. He thinks his hip is fine, so he's just going to follow his doctor's advice and do what he's told. He has a pre-op appointment scheduled, so when we got home, I decided to go for a walk around the block and get a little exercise. I've been waiting to write this post for a couple of weeks, but 5b5f913d15

Open Autocad and press and hold the right mouse button (^) on the drawing for a second. A tooltip is displayed. Double click on the message. A new tool is added to the toolbox named "SearchTextExtractor" This tool can search for keywords, numbers, text, etc, in drawings and imported dxf files. The syntax is: SearchTextExtractor(@OutputDirectory,[TextSearch])
TextSearchOptions is an object that contains the following settings: TextSearchInputFlag = 1 -- input flag for text search. (see the help for more details) DisplayItemOnly = 0 -- display only the found objects (0 = display all objects, 1 = display only found objects) NormaliseText = 1 -- display the normalised text of the found items (1 = normalise text, 0 = not normalise text) InitialMatch = 1 -- display the initial match of the found items (0 = no initial match, 1 = display the initial match) Sample TextSearchOptions:

I've seen home construction jobs where the contractor replaces a wall with glass doors. This often seems to be in the master bathroom or kitchen. To me this seems like a really bad idea, as the doors need to be installed before the work on the walls is done. The glass doors also look really ugly when installed as they tend to look like a second wall. What are the tradeoffs when replacing a wall with glass doors? A: No trade offs. The glass is still a solid piece of glass, the only thing different is that you can see through it. Nothing will be supporting the glass. The glass will need to be glued to the frame, and the frame will be generally smaller. The frames are almost always over 1/2 inch wide. A standard 2x4 is 3/4" wide, a 1x6 is 3/4" wide, the glass will be more likely to be 3/4" or 1" wide. The frame should be roughly the same size as the opening. The glass can be purchased in sheets or pre-glued on the frame. A: Homes with glass doors are generally not a bad idea. What you have to be careful of is if the builder is trying to do something that they really shouldn't be doing. Is there any reason the glass doors were installed before the completion of the walls? Are they running the wires to the doors through the wall or
