December 26, 2563 B.C.â€” I made a very simple guide for those who can't read/understand English using well & not good for modifying your game either. It is very simple. I just pointed out how to create a game so that it can run on your local machine via NFS, FTP, SSH, HTTP, TCP, DNS, DNS. I have also set some values â€”which you can easily change. It should also work on other operating systems. I just listed some steps to create a server. [] You can create a server using a .conf file and whatever else you want, but this should work and I made a few mistakes and I just can't find them.
