Getting started with Photoshop Before you can do anything useful with Photoshop, you need to get started. In this chapter, I start with a brief overview of Photoshop's main windows. Then you discover the tools that you need to work in Photoshop. You can jump to a specific chapter for more information on a topic. Photoshop 7 has only three main

windows to work with: * **Image Window:** This window contains a single, adjustable image. It can act like a resizable image window or as a new, empty image. Click the Image Window icon in the upper-left corner and choose Show Image to bring a picture into the window. Click the Image Window icon and choose New Image to create a new empty image. * **Layers Window:** This window enables you to place an image into a document in layers. Layers enable you to work with multiple copies of an image at one time. * **Palettes Window:** This window enables you to modify the appearance of the image with

color- or other-specific tools. The Palettes Window enables you to create, modify, and edit any color, including the brightness, contrast, and hue. Photoshop CS3 comes in a different design from the previous versions of Photoshop. The Layers Window is now a fully featured image window (see Figure 12-1). FIGURE 12-1: The Layers Window enables you to edit an image in layers, as shown here. You can return to the old-fashioned Layers Window by using the Layout icon on the Layers Window toolbar. Alternatively, you can find the Layers Window in the Window menu by choosing Window | Layers. ## Images,

Q: Angular 2 - How to set icons from service in a custom component? I'm using this example to switch an icon when a component is mounted. The provider method is injected in the constructor and it works fine when using the class method. I have to modify the template of the component so I was wondering how to do that in a global way. Is it possible to define icons from an external path, from an external service? Do I have to create the component from scratch to do it? I'm using Angular 2.0, not AngularJS. A: For

AngularJS, you can get the answer here // This is the service used to render the icon app.service('iconsService', function () { this.icons = {}; this.icons.openBrowsers = ''; this.icons.openLibraries = ''; this.icons.searchIndex = ''; }); app.component('searchIndexComponent', { template: 'Hi{{searchText}}', bindings: {}, templateUrl:'searchIndexComponent. html', controller: function () { this.searchText = ''; }, controllerAs:'searchText', scope: {}, bindings: {}, controllerAs:'searchText' }); HTML Captain Marvel Joins The "Star Wars" Fold You're probably thinking, "He's not BIG enough.
