So I didn't completely follow the guide on how to create a NTFS partition. I'm having problems re-installing Windows. I want to re-install Windows because I can't get the restoration disc to work. You may remember I had a problem with the DVD, and you told me to download the Windows XP ISO to create a CD. I installed the ISO, and when I try to boot into the CD, I get the Windows "Loading Windows..." screen. I rebooted, and I get the "Reboot and Select proper Boot Device" screen. I reboot, and I get the same thing. I don't think this is the proper way to get a new CD. Can someone help me? I just received a Pentium 4 3.06GHz computer with 533MHz front-side bus that has two SATA hard drives (a nother 2GB hard drive is included) and 2 GB of RAM.. Installed this new computer and found this hard drive does not function until it installs Windows. The Windows repair screen will not acknowledge that hard drive unless I select a different hard drive. Is there a way to convert this to a IDE or ATA drive? Thanks in advance for the help. Can you help me install an Ubuntu machine that is not recognized by Windows xp. The other machine has an integrated card. I would like to try Ubuntu. I am asking because Windows has a big problem with device drivers on this machine Hi can you help? Have to reinstall windows because of virus issues Have to reinstall xp and lost the boot cd. So i can't install windows from my external usb hard drive which means i cant reformat and re-install. What i do have is the installation disk for win 7 ultimate that came with the laptop. But i'm downloading a ubuntu iso and can't find a way to make it boot from usb and installing from a usb port. Please help. Thx!

are you ready to upgrade to windows 10? if you're planning on upgrading to windows 10 from windows 7 or windows 8.1, you can upgrade by downloading the windows 10 iso file from microsoft's website. you'll also need a usb stick, dvd, or external hard drive to burn the iso file to a disc. if you have any questions, leave a comment below or get in touch with us on twitter. due to the fact that microsoft office 2010 and 2013 have some problems when you try to open a xml file, you may want to install an xml editor. the best xml editor for the windows platform is called notepad++. this editor is a very popular xml editor, and you can download it for free. if you want to remove all the xml files in a folder, then you can use this xml editor. it has many more features than other xml editors, such as the ability to make a backup of xml files. it is a very simple xml editor to use. assuming that your dvd drive is enabled and you boot from the dvd, windows 10 should show up on your desktop. it will then start downloading all the updates and drivers necessary for a smooth installation. this can take a while if your internet connection is not very good. you should be able to get to the desktop when this is done. check your message center to see if there are any updates pending. the installation process will ask you if you would like to install a third-party product like adobe reader or acrobat, or if you would like to completely replace windows. if you choose to replace windows, you will be asked to enter your product key. this will then allow windows 10 to activate. windows 10 will then install on top of your existing operating system. 5ec8ef588b
